Python Programming - 2301CS404

Lab - 13

Roll No.: 324

Name: Aditya Chauhan

01) WAP to create Calculator module which defines functions like add, sub,mul and div.

Create another .py file that uses the functions available in Calculator module.

In [1]:
```
import calc
print(calc.add(1,2))
print(calc.diff(3,2))
print(calc.mul(1,2))
print(calc.div(4,2))
```

```
3
1
2
2.0
```

02) WAP to pick a random character from a given String.

In [9]:
```
import random
s = input("Enter String")
print(random.choice(s))
```

```
f
```

03) WAP to pick a random element from a given list.

In [11]:
```
l1 = list(map(int,input("").split()))
print(random.choice(l1))
```

```
36
```

04) WAP to roll a dice in such a way that every time you get the same number.

In [18]:
```
import random
random.seed(96)
print(random.randint(1,6))
```

```
3
```

05) WAP to generate 3 random integers between 100 and 999 which is divisible by 5.

In [20]:
```
l=list(range(100,1000,5))
print(random.choices(l,k=3))
```

```
[185, 405, 140]
```

06) WAP to generate 100 random lottery tickets and pick two lucky tickets from it and announce them as Winner and Runner up respectively.

In [41]:
```
lott = random.sample(range(100),100)

winner = random.sample(lott,2)
print(f"{winner[0]} is the winner")
print(f"{winner[1]} is the runners up")
```

```
43 is the winner
49 is the runners up
```

07) WAP to print current date and time in Python.

In [22]:
```python
import datetime
print(datetime.datetime.now())
```

```
2026-03-03 10:27:49.602035
```

08) Subtract a week (7 days) from a given date in Python.

In [26]:
```python
dat = datetime.date(2026,2,10)
ans = dat - datetime.timedelta(days=7)
print(ans)
```

```
2026-02-03
```

09) WAP to Calculate number of days between two given dates.

In [31]:
```python
dat1 = datetime.date(2026,2,28)
dat2 = datetime.date(2026,3,3)
print((dat2-dat1).days)
```

```
3
```

10) WAP to Find the day of the week of a given date.(i.e. wether it is sunday/monday/tuesday/etc.)

In [33]:
```python
ans = datetime.datetime.now().strftime("%A")
print(ans)
```

```
Tuesday
```
